Multi-Step Addition and Subtraction Problems

No.	Question	Calculation Required (Do brackets first!)
e.g.	The stadium has 25000 seats. 11348 adults and 2767 children come to see the game. How many empty seats are there?	25000 - (11348 +2767) =
1.	Dorothy's family are saving money for a holiday that costs $1845. If they have already saved $490 and then raise $146 from a garage sale, how much more do they need to save?	
2.	A study of 32164 people found that 25412 were right handed, 3849 were left handed and the remainder were ambidextrous (could use either hand). How many were ambidextrous?	
3.	The crisp factory needs to make 85000 bags an hour. If a machine breaks down and the factory only makes 47233 bags in one hour, how many does it need to make in the next hour to catch up?	
4.	Dave earns $19385 as a bus driver and his wife Christine earns $28460 as a teacher. If Dave gets a pay rise of $217 a month, how much less than his wife does he earn?	
5.	If Cleopatra was born in 69 BC and lived to be 39 years old – how many years ago did she die?	

10. Three fruit trees were delivered to a nursery. They weighed 18kg, 35kg and 27kg. How much did they weigh in total?
11. Hannah has $2.55 and Max has $1.35. How much do they have in total?
12. Jenny runs for 146 seconds and Ali runs for 123 seconds. What was the total time they ran for?
13. A shop has 78 ripe bananas and 22 brown ones. How many are there altogether?
14. What is the total when 72 is added to 38?
15. Oliver finds 75c on his way to school and 15c on his way home. How much did he find altogether?
16. Lily collects 24 different leaves from around her neighbourhood. Her friend gives her 16 more. How many does she have altogether?
17. There are 32 children in one class and 28 children in another. How many children are there altogether?
18. Scott has 35c and Tom has 85c. What is the total amount the two boys have?
19. Ashley has 65c saved up. She finds 75c under her bed, now how much money has she got?
20. What is the total when 34 is added to 49?

Rounding in Context

Calculate the answers to these word problems. Can you suggest what a reasonable rounded answer would be and why?

Question
e.g. If Jess wants to buy a tablet that costs $112 and she has 27 weeks to save up for it, how much should she save per week?
1. Finn wants to make a rope bridge in his garden. He has calculated that he will need 6 pieces of rope that are 1.23m long. If the shop sells rope by the metre, how much will he need to buy?
2. There are 137 students going to on a trip to the zoo and each minibus they are travelling on can seat 13 passengers. How many minibuses will need to be booked?
3. Max is reading a book which is 449 pages long. If he reads 17 pages a night before he falls asleep, how long will it take him to finish the book?
4. Olivia's family is taking a road trip from Melbourne to Sydney (878.4km) and then continuing from Sydney to Brisbane (915.6km). How far will they be travelling?
5. David's dad wanted to buy him new carpet for his bedroom. First, they measured the room and found that it was 3.25m long and 2.96m wide. Then he contacted a shop who told him that carpet was sold in square metres (m^2). How many square metres of carpet do they need?
6. Chris' family are moving house and spend 2 hours 44 minutes and 15 seconds packing boxes before having lunch. After lunch they get back to it and spend another 3 hours 12 minutes and 44 seconds packing. How long might they say it took to pack their things if asked?

Mental Calculations Challenge

Look at the varied addition and subtraction calculations below and work your way through them. See how many points you can score. You could play against others or set yourself a time limit.

Scoring System

Score 2 points for every correct answer achieved after using a written method of calculation.

Score 0 points for any incorrect answer achieved after using a written method of calculation.

Score 3 points for every correct answer achieved after a mental calculation.

Score 1 point for each incorrect answer achieved after using a mental calculation.

Choose just one of these investment schemes below to invest your remaining money into and see what you can build it back up to in ten years. Use the grid to work out how your savings progress!

Money remaining:

Property Investment Your money doubles every 2 and a half years.	**High Risk Investment** Toss a coin for the end of each of the 10 years – if it is heads, double your money. If it is tails, lose half of it.	**Savings Account** Earn 5% each year in interest.
Start a Business Choose how much to invest and then roll a dice. 1 = double your investment 2 = lose it all 3 = triple your investment 4 = get your money back 5 = get half your money back 6 = get your money back + 50%	**Stock Market Investment** For 5 years earn nothing, for the other 5 years earn 10%. This can happen in any order you like!	**Hide Your Money Under Your Mattress** Amount doesn't change!
